

- 1. Returns a copy of a portion of the array. the portion is specified as an index argument
- 2. `JSON.stringify()` parses objects into JSON strings that can be then stored in a .json file.
`jsonString` will be a JSON object in string format:

```
{  
  "name": "Jane",  
  "age": 25,  
}
```

- 3. true, true
- 4.

POC	let	const	var
Scope	Block	Block	Function
Hoisting	None	None	Hoisted to the top of the function. if a <code>var</code> variable is initialized globally in a file, it gets hoisted to the top of the file
reinitialization	Possible	Impossible	Possible
re-assignment	Possible	Impossible	Possible
Usage	Initializes a block-scoped variable	Initializes a block-scoped constant	Initializes a function-scoped variable
Maintainability	Easier to maintain	Easier to maintain	Harder to maintain due to its hoisting nature
